

With Dakenasv's versatile and high quality range of special vehicles and attachments, economical farming has never been so accessible! As the distributor of Bobcat® special vehicles and attachments in the Australian Rural market, Dakenasv has a machine and attachment for any job on the farm. Included in this range are Bobcat Telescopic handlers, a range of attachments all of which boast the reliability, quality and performance that the world class Bobcat brand represents!

Blending innovative engineering, prodigious power and superior performance in a single machine the Bobcat® telescopic handler is useful for loading, handling & placing material, bale handling, waste transfer, digging, grading, back-filling & more! It's light & hardy unitised frame gives these incredible handlers the strength to lift as much or more than heavier machines in the same class.

Built in France these machines represent the pinnacle in performance engineering combining exceptional stability, manoeuvrability, smooth telescopic action, speed and power. A combination of the speed and agility of a skid-steer loader with the extended reach of a forklift, Bobcat® telescopic handlers are the perfect machine to handle your toughest jobs effortlessly & efficiently with the peace of mind of the Bobcat name.

The many strong features of the Bobcat® Telescopic handlers include unitised frames, hydrostatic drive for increased safety over a torque converter drive, single joystick hydraulic operation and an advanced boom with internal hydraulic lines and cylinders.

Boasting the Hydraulic Quick-Tach system, Bobcat Telescopic Handlers are versatile machines on the farm with the capability of fast and easy mounting and dismounting of a range of different attachments. The operator can hook up non-hydraulic attachments without having to leave the telescopic handler cab. This saves time on every jobsite on any farm and means that multiple applications need not be performed by different vehicles!

All Bobcat® telescopic handlers have a simple-to-use, heavy duty industrial Hydrostatic transmission that offers great wheel torque for digging & pushing, dynamic breaking, smooth transition between low and high speeds and also two speed ranges.

The ease of use of the Bobcat® Telescopic Handlers is assured through a single multifunctional joystick that operates the boom, hydraulic functions & speed control meaning that the Telehandlers can handle dual functions such as simultaneous extension of the boom and curling a bucket. This means drastically reducing cycle times and increasing productivity on site!

The Bobcat® telescopic handlers also provide high safety standards with visual and audible notification of longitudinal instability, the constant availability of information

about the load being handled and several other passive and active safety devices as standard. With an Operator Cab designed to provide maximum space with easy use controls, so the operator is able to work all day in a safe and comfortable environment.

The combination of excellent performance, the highest safety standards and advanced technology in ergonomics, means the Bobcat range of Telescopic handlers meet all operators' requirements and also the requirements of the modern economical farm. There are 3 capacities in the range with booms 5.6m to a massive 17m with maximum load capacities of between 2.5 to 4 tonnes meaning there is a Telescopic Handler for any application.

The largest capacity models of the T40140 & T40170 offer a maximum lift capacity of 4 tonnes. The boom is both light and strong and has a built-in counter-bow to ensure straightness when extended under full load. In addition, the Aggravating Movements Arrestor (AMA) ensures loads are always handled in complete safety.

Designed to handle a wide range of material handling applications in construction the T3571L, T35120L and the T35120SL offer the features of larger models including the frame levelling system, a new cab & advanced new boom ranging in maximum lift height from just over 7 metres to nearly 12 metres.

The T2550 & T2556 are the smallest in the Bobcat Telescopic Handler range. Compact in size, high power to weight ratio and 2 speed ranges makes these models ideal for a wide variety of material handling applications in industry, construction & landscaping.
